Frameworks: React, Flask, Django
Tools: TailwindCSS, styled-components, Redux, Postgres, Mongo, Prisma, Git, Postgres, GraphQL, Apollo Client, React Query, Vercel, AWS, Kafka

EXPERIENCE

Retool, Software Engineer   2023 - PRESENT
- Working on the core in-browser IDE focused on the Retool builder experience.
- Shipped many product tweaks around resource creation to increase the conversion from signup -> active builder (i.e., someone who builds retool apps)
- Contributed to code search (https://twitter.com/retool/status/1724528789714026959). One of our more requested features attached to over 2m in ARR
- Led efforts to introduce bulk component editing which has the potential to 10x productivity when building a Retool app

Gem, Software Engineer   2022
- Led work on Talent Pipeline port to homepage to increase adoption of the existing product
- Built resume keyword highlighting in the Application Review (https://www.gem.com/solutions/application-review) product to make Gem a full-service recruiting tool
- Heavy contributor to typescript migration from plain javascript

Brex, Software Engineer   2020 - 2022
- Built vendor cards create and request flows leading to millions in GMV volume
- Built 0 -> 1 "your cards" page (employee entry point) which moved the needle on Brex's self-serve ability leading to decreases in CX contact rate
- Contributed to internal component-library + frontend coding standards and best practices
- Mentored and onboarded engineers to the company/codebase

Confluent, Software Engineer   2019 - 2020
- Created design system. Worked to maintain, document and evangelize after building v1 system of 40+ components
- Feature development; broker metrics monitoring, redesigns, etc
- Mentored an intern

PROJECTS

Dine

Built a full-stack restaurant reservation marketplace from scratch using Next.js and Postgres. Made 100s in revenue

Book Me

A simple, lightweight booksy alternative to allow clients to easily schedule appointments with service providers. https://book.abdul.im/
